

01. Create a Single Page Application (SPA) using JS.

- ❖ In here use the POS system you created earlier using CSS Frameworks, and then convert it into a Single page application.

The cases you should implement are like as follows. And refer the video example for more details.

01. All the content in your POS should be in a one file called index.

02. After refreshing the page you should be where you end up lastly.

Note :-

Use jQuery library for DOM manipulation.
